NORDIK

FIRST AID – HYGIENE – TRAINING

Safety you can count on. Solutions that work.

NORDIK Hungary Ltd. has been committed to creating a safer and healthier environment for its customers for more than two decades. Our company's main profile is the distribution of workplace and community first aid equipment, life-saving devices and hygiene products, as well as providing expert advice and customized solutions.

The most important thing for us is to protect human life and enable rapid response. That is why our range includes not only products that comply with legal requirements, but also modern, innovative solutions that meet the highest professional standards.

First aid? Hygiene? Legal compliance?

We offer not only products, but also comprehensive solutions. Whether for your office, factory or event venue, you will find professional, ready-to-use equipment and expert assistance.

We are proud to offer our customers high-quality products that are among the best on the market, while at the same time caring for the environment and meeting requirements for documentation, transparency and expert logistics management. This makes it easier for our customers to work with us and helps them avoid unnecessary work.

Our partners include numerous small and medium-sized enterprises, industrial players, public institutions, schools, and healthcare providers. We provide them with what they are looking for every day: reliable, durable, professional solutions – quickly and at a fair price.

Every employee should be safe at work and go home healthy every day.

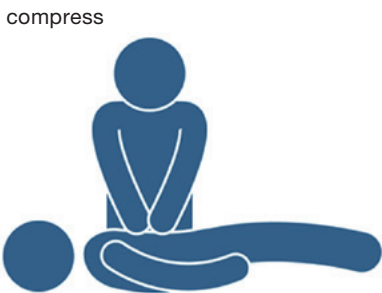

- **Expertise** – Our employees have extensive experience in the fields of health protection, occupational safety, and community hygiene.
- **Speed** – We work from our warehouse and deliver most of our products within 24-48 hours.
- **Quality and compliance** – We work exclusively with reliable, certified manufacturers, and our products comply with current Hungarian and European regulations.
- **Customization** – No two companies are alike. We offer customized solutions for all our partners.
- **Online convenience** – Our web store, www.nordik24.com, offers simple, fast, and transparent ordering for small businesses and large companies alike.

Our prominent brands

BASIC LIFE SUPPORT - STEP BY STEP

SAFETY		Make sure that you, the victim and any bystanders are safe.
RESPONSE Check for a response		Shake the victim gently by the shoulders and ask loudly: „Are you all right?”
AIRWAY Open the airway		- If there is no response, position the victim on their back. - With your hand on the forehead and your fingertips under the point of the chin, gently tilt the victim's head backwards, lifting the chin to open the airway.
BREATHING Look, listen and feel for breathing		- Look, listen and feel for breathing for no more than 10 seconds. - A victim who is barely breathing, or talking infrequent, slow and noisy gasps, is not breathing normally.
ABSENT OR ABNORMAL BREATHING Alert emergency services		- If breathing is absent or abnormal, ask a helper to call the emergency services or call them yourself. - Stay with the victim if possible. - Activate the speaker function or hands-free option on the telephone so that you can start CPR whilst talking to the dispatcher.
SEND FOR AED		- Send someone to find and bring back an AED if available. - If you are on your own, DO NOT leave the victim, but start CPR.
CIRCULATION Start chest compress		- Kneel by the side of the victim. - Place the heel of one hand in the centre of the victim's chest - this is the lower half of the victim's breastbone (sternum). - Place the other hand on top of the first, with fingers interlocked. - Keep your arms straight. - Position yourself vertically above the victim's chest and press down on the sternum at least 5 cm (but no more than 6 cm). - After each compression, release all the pressure on the chest without losing contact between your hands and the sternum. - Repeat at a rate of 100-120 / 1 min.
COMBINE RESCUE BREATHING WITH CHEST COMPRESSIONS		- If you are trained to do so, after 30 compressions, open the airway again, using the head tilt and chin lift. - Pinch the soft part of the nose closed, using the index finger and thumb of your hand on the forehead. - Allow the victim's mouth to open, but maintain chin lift. - Take a normal breath and place your lips around the victim's mouth, making sure that you have an airtight seal. - Blow steadily into the mouth whilst watching for the chest to rise, taking about 1 second as in normal breathing. This is an effective rescue breath. - Maintaining head tilt and the chin lift, take your mouth away from the victim and watch for the chest to fall as air comes out. - Take another normal breath and blow into the victim's mouth once more to achieve a total of two rescue breaths. - Do not interrupt compressions by more than 10 seconds to deliver the two breaths even if one or both are not effective. - Then return your hands without delay to the correct position on the sternum and give a further 30 chest compressions. - Continue with chest compressions and rescue breaths in a ratio of 30:2.
COMPRESSION-ONLY CPR		If you are untrained, or unable to give rescue breaths, give chest-compression-only CPR (continuous compressions at a rate of 100-120 / 1 min).

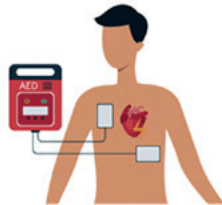

BASIC LIFE SUPPORT - STEP BY STEP

WHEN AED ARRIVES
Switch on the AED and attach the electrode pads

- As soon as the AED arrives switch it on and attach the electrode pads to the victims's bare chest.
- If more than one rescuer is present, CPR should be continued whilst the electrode pads are being attached to the chest.

FOLLOW THE SPOKEN/VISUAL DIRECTIONS

- Follow the spoken and visual directions given by the AED.
- If a shock is advised, ensure that neither you nor anyone else is touching the victim.
- Push the shock button as directed.
- Then immediately resume CPR and continue directed by the AED.

IF NO SHOCK IS ADVISED
Continue CPR

- If no shock is advised, immediately resume CPR and continue as directed by the AED.

IF NO AED IS AVAILABLE
Continue CPR

- If no AED is available, OR whilst waiting for one to arrive, continue CPR.
- Do not interrupt resuscitation until:
 - A health professional tells you to stop OR
 - The victim is definitely waking up, moving, opening eyes, and breathing normally OR
 - You become exhausted
- It is rare for CPR alone to restart the heart. Unless you are certain that the victim has recovered continue CPR.
- Signs that the victim has recovered
 - Waking-up
 - Moving
 - Opening eyes
 - Breathing normally

IF UNRESPONSIVE BUT BREATHING NORMALLY
Place in the Recovery Position

- If you are certain that the victim is breathing normally but still unresponsive, place them in the recovery position.
- Be prepared to restart CPR immediately if the victim becomes unresponsive, with absent or abnormal breathing.

Basic Life Support
according to the European Resuscitation Council
2021 guidelines.

First Aid system | For effective workplaces

First Aid at work

First aid at work – A life-saving investment

- Appropriate first aid equipment and training are not only a legal requirement, but also a fundamental safety requirement.
- Quick intervention can reduce the severity of injuries and lost working time.
- Prevention is always cheaper than dealing with the consequences!
- It is particularly important in high-risk work environments (production lines, construction sites, logistics).
- Regular checks, replacement and education are necessary to maintain safety.

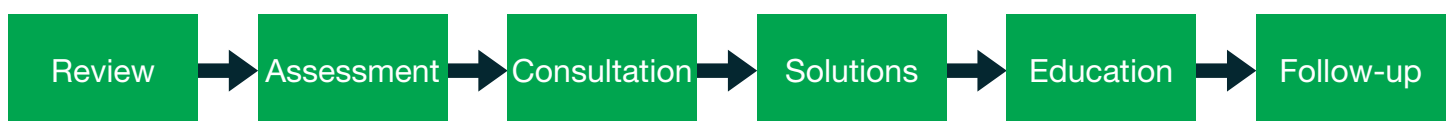

Optimized costs

- Purchase of devices of the same quality at a lower price
- Choosing of complete service package instead of separate purchases

Savings of up to 20-25% can be achieved!

Efficient First Aid system

Comprehensive first aid solutions, consulting, training, and process monitoring. First Aid from A to Z.

First Aid system

Review

- Review and discussion of requirements and regulations

On-site assessment

Based on preliminary consultation

- Inspection of the workplace and work site
- Review of current First Aid equipment and tools
- Standard compliance check

Consultation

- Consultations and professional recommendations based on the location regarding First Aid equipment and methods

First Aid system

Solutions

- Select of appropriate First Aid equipment
- Product consulting
- Training
- Installation

Our solutions:

- First aid kits (boxes)
- First aid stations
- First aid for burns
- Plaster, adhesive bandages
- Mobile eye washes
- Eye wash stations
- Emergency shower systems
- Defibrillators
- Stretchers
- Complex first aid solutions
- etc.

Education

- Practice-oriented training that provides real knowledge
- Small groups
- Accident prevention
- Use of equipment
- Life-saving activities
- Injuries
- Sudden illness, other accidents

First Aid system

Follow-up

- Periodic inspection of First Aid equipment and products
- Refilling, replacement and replenishment of products
- Annual inspection of defibrillators
- Regular training

Refilling First Aid kits

- **According to both DIN and MSZ standards**
- **Unique kit identification:** each kit has a unique identifier that is entered into the Central Registration System.
- **Everything can be tracked in the central system:** refilling time, refilled products, damages, other problems, etc.
- **Spare parts:** replacement of various parts in the event of broken or damaged kits.
- **Replenishment based on actual shortage:** a complete report is made during refilling, including the products and kits, so it can be checked exactly what has been refilled and what the invoice is for, and there is no unnecessary refilling or loss.
- **Immediate replenishment within 48 hours:** In special cases, if for any reason a large quantity of dressings has been used up, they can be replenished within 48 hours.

Defibrillator inspection

- Inspection of medical devices in accordance with legal requirements
- **Immediate inspection within 48 hours**

First Aid | First Aid at work

Hungarian standard (MSZ)

Act XCIII of 1993 on Labor Safety

Excerpt:

46.§ The workplace must be equipped with the necessary material, personnel and organizational conditions for first aid, taking into account its nature, location, sources of danger, number of employees, the effects of work and the working environment, as well as the organization of work.

3/2002. (II. 8.) Joint Decree of the Ministry of Social Affairs and Health on minimum occupational safety requirements in workplaces

Excerpt:

20. § (1) Every workplace and shift must have first aid equipment or a first aid kit appropriate to the nature of the activities and work processes and the number of people working there, as well as a trained first aider from among the employees. One or more rooms for first aid, easily accessible with a stretcher, shall be provided where the size of the premises, the nature of the activities carried out and the frequency of accidents so require.

(2) First aid equipment, first aid kits and, depending on the activity, stretchers in sufficient quantity and of suitable quality shall be kept in a clearly visible, easily accessible and protected place.

(3) Used, expired or unusable equipment shall be replaced.

(4) First aid stations and the routes leading to them shall be marked in accordance with separate legislation.

(5) Further requirements relating to first aid equipment, the design of first aid stations and the organization of first aid, as well as the training and further training of designated first aiders, are laid down in separate legislation.

Guidelines on the contents of first aid kits

The mandatory contents of first aid kits to be kept on hand are specified in Section 21 of Decree 15/1972. (VIII. 5.) EüM, but this decree expired on January 1, 2009. Primarily for traditional reasons, many workplaces continue to follow these guidelines.

German standard (DIN)

Through its DIN regulations, the legislator (Deutsches Institut für Normung, abbreviated DIN) defines the minimum requirements of first aid kits and dressing materials for the various fields of application.

Both in road traffic and in companies, schools and kindergartens and in professional use, compliance with these standards is regularly monitored by the respective responsible bodies (BG, police, etc.).

Requirements for the contents of First Aid kits

The following tables show which first-aid equipment you need for your operation.

Business type	Number of employees	MSZ standard	DIN standard
Administration and trading companies	1 - 30 employees	I.	–
	1 - 50 employees	II.	1x DIN 13 157 first-aid-box
	51-100 employees	III.	–
	51 - 300 employees + for every additional 300 employees	–	1x DIN 13 157 first-aid-box + additional 1x DIN 13 169 first-aid-box
	101-200 employees	IV.	–
Production and processing plants	1 - 20 employees	–	1x DIN 13 157 first-aid-box
	1 - 30 employees	I.	–
	1 - 50 employees	II.	–
	21 - 100 employees + for every additional 100 employees	III.	1x DIN 13 159 first-aid-box + additional 1x DIN 13 169 first-aid-box
	101-200 employees	IV.	–
Construction sites	1 - 10 employees	–	1x DIN 13 157 first-aid-box
	11 - 50 employees + for every additional 50 employees	II.	1x DIN 13 169 first-aid-box + additional 1x DIN 13 169 first-aid-box
	51-100 employees	III.	–
	101-200 employees	IV.	–

Important

The guideline provision on first aid equipment in the workplace, the standard issued by the Hungarian Standards Institution in 1980 and then in 1981, approved on June 26, 1989, was repealed with effect from April 1, 2015. In the absence of domestic regulations, equipment standards applied by other countries in the European Economic Area are acceptable, including DIN standards. In this case, first aid equipment must be accompanied by first aid instructions in Hungarian or with illustrations.

Celox Gauze haemostatic Z-fold gauze

Special haemostatic bandage that provides rapid and safe bleeding control in cases of severe bleeding (both venous and arterial). Suitable for controlling moderate, severe, or even life-threatening traumatic bleeding where traditional bandages are ineffective. Can also be used for head, neck and chest injuries. Upon application, bleeding is stopped within seconds at the site of heavy bleeding, forming a sticky, gel-like layer. The Z-folded bandage can be easily torn to size. Size: 7.6 cm x 1.5 m.

Internationally certified (NSN: 6510-99-981-6636), used by military and defense units worldwide (US forces, NATO forces, etc.).

Brand: Celox Medical

SKU	Version	Carton
EL8000	Special haemostatic bandage	1 pcs

Sam XT Tourniquet

The SAM XT Tourniquet is a professional blood loss control device designed specifically to save lives in critical situations. Thanks to its patented TrueForce™ technology, the tourniquet automatically locks at the correct tension, ensuring fast, effective and safe application even in stressful situations.

The SAM XT is a reliable companion in military, law enforcement, rescue and hiking environments. Made from robust, weather-resistant materials, the tourniquet can be applied with one hand, making it ideal for self-help or first aid. Its compact size means it fits easily into a backpack, EDC kit or first aid kit.

This tourniquet complies with TCCC (Tactical Combat Casualty Care) guidelines, making it an excellent choice for professional users and prepared civilians who don't want to leave blood loss to luck.

Eye Wash | First Aid for the eye

Every second counts: Protection for your most important sense

i Did you know?

The eye is a true wonder of nature – and our most vital sense organ. Over 90% of the information we perceive comes through our eyes. That's why it's crucial to protect them and be prepared for emergencies.

In the event of an eye injury — whether caused by a foreign object or chemical substance — every second matters. Without immediate and appropriate first aid, permanent damage can occur.

According to professional safety statistics, these types of accidents are among the most common year after year.

Proper first aid equipment is critical wherever the risk of eye injury is high — such as on construction sites, in warehouses, industrial kitchens, manufacturing plants, or laboratories.

Eye injuries are often caused by exploding batteries, splashing alkalis, ammonia, cement, cleaning agents, paints, or adhesives. Metal shavings, dust, and other debris must be rinsed out immediately to prevent them from embedding in the eye and causing further harm. Once a foreign body becomes embedded, only specialist medical care can help.

In cases involving hazardous substances, prompt and professional first aid can be life-saving.

Treatment of eye injuries

1

Start rinsing the eye immediately!

Eye wash solutions are most effective in the first few seconds.

2

Rinse the eye generously.

Open the injured eye with your fingers, then begin to wash the open eye with a large amount of suitable eye wash.

3

Rinse the eye for a long time.

In case of injury, rinse eyes for at least 15 minutes. If necessary, use several bottles of eye wash or continue rinsing at a plumbed-in eye wash unit.

i REMEMBER!

In case of physical or chemical eye injury, always seek medical attention!

You can continue rinsing the injured eye on the way to the hospital, so take eye wash solution with you! If you do not have eye wash solution, you can use lukewarm running water or water in a cup, although this is less effective than a proper eye wash solution.

Eye wash types, rinsing solutions

Type of injury	Eye wash solution / effect	Endangered workplaces
Mechanical injuries Injuries caused by foreign objects (e.g. dust, dirt, wood chips, metal splinters, etc.)	0.9% sodium chloride solution (e.g. green first aid eye wash) → Washes foreign bodies out of the eye	Workshops Metalworking companies Industry Woodworking companies etc. Shipyards and mining Civil Protection
Chemical injuries Acids (e.g. battery acid (sulphuric acid), hydrochloric acid, phosphoric acid, acetic acid etc.) Alkalis (e.g. lye, cement, ammonia, washing soda, dishwasher detergent etc.)	Phosphate buffer solution (e.g. blue BioPhos®74 eye wash) → Neutralizes chemicals in contact with the eyes → Not to be used with calcium-containing materials (e.g. cement, lime, concrete)	Chemical laboratories Chemical companies Battery manufacturing Police Military Fire department and others
	Borate buffer solution (2-in-1) (e.g. Cederroth eye wash) → Neutralizes chemicals in contact with the eyes → Washes foreign bodies out of the eye → Can also be used on substances containing calcium → The effect is generally stronger on alkalis than acids	Chemical laboratories Chemical companies Battery manufacturing Construction industry Fire department and others Warehousing Painting Workshops Processing industry

Use of eye wash stations

Application — simple and quick

Eye washes with ergonomic rinsing heads are very easy to use:

1. Remove the bottle from the station.

2. Remove the dust protection cap from the eye wash bottle head.

3. Turn eye rinsing bowl by 180° until sealant breaks.

4. Lean back the head, place the eye cup over the eye and rinse.

5. Bend the head forward and rinse if clothing should not get wet.

Please note:

--

Medical advice should be sought for any eye injury or soiling. Flushing should continue during transport to the doctor. Do not reuse an opened bottle (risk of infection).

EYE EMERGENCY PLAN

NORDIK

POLLUTANTS INFLUENCE	RECOMMENDED EYE WASH SOLUTION	RECOMMENDED RINSING TIME	FURTHER RINSING UNTIL MEDICAL ATTENTION
Foreign body e.g. dust, dirt, soot, wood chips, metal splinters, etc.	0.9% physiologic saline solution	Rinse the eyes until the foreign bodies are washed out	0.9% physiologic saline solution
Acid e.g. battery acid (sulphuric acid), hydrochloric acid, phosphoric acid, acetic acid etc.	Buffered eye wash solution	Rinse the eyes for approx. 2,5 minutes until the bottle is empty	0.9% physiologic saline solution
Alkali e.g. lye, ammonia, washing soda, dishwasher detergent etc.	Buffered eye wash solution	Rinse the eyes for approx. 2,5 minutes until the bottle is empty	0.9% physiologic saline solution
Other e.g. solvents, oils	0.9% physiologic saline solution	Rinse the eyes until the unpleasant feeling is gone or medical treatment is provided	0.9% physiologic saline solution

1. Remove the bottle from the eye wash station resp. the eye wash case.

2. Remove the dust protection cap from the eye wash bottle head.

3. Turn the eye cup 180° in the direction of the arrow until the sealing breaks.

4. Lean your head back and rinse the affected eye consistently.

5. Lean your head forward before putting the bottle down to protect your clothes.

IMPORTANT!

Regardless of the type of injury, rinse the eye always consistently and carefully, and thereby keep the eye wide open. Press the bottle slightly while rinsing. Use the special double rinsing head bottles if both eyes are injured. Do not reuse an opened bottle (risk of infection)!

Medical advice should be sought for any eye injury or soiling! Continue rinsing with sodium chloride solution (0,9%) until medical advice is given.

Eye Washes – For physical contamination

Actiomedic Eye Care First Aid eye wash with sodium chloride solution 0.9%, 500 ml

Eye Washes – Special eye washes

Cederroth borate buffered eye wash solution, 500 ml

A personal eyewash bottle containing sterile, buffered, saline eye wash solution. The Cederroth Eye Wash is intended for washing away foreign particles (like dust, dirt, metal and wood splinters, etc.) and dangerous liquids, like alkali or acids, from an eye in an emergency first aid situation at workplaces. The borate buffer solution neutralizes splashes of alkalis and acids, restoring the eye's natural neutral pH. The effect is in general stronger for alkalis than for acids. 100% phosphate-free, so if an accident occurs with a calcium-containing substances (e.g. cement, concrete or lime), use the borate buffered Cederroth eye wash solution. Easy-to-use bottle with an ergonomic rinsing head, dust cap and clear instructions for use. The bottle is easily opened and ready to use by twisting off the dustcover. The integrated eye cup helps keeping the eye open during rinsing and ensures a generous flow without unnecessary waste. For mobile use or for refilling the station and case.

Content: 500 ml Dimensions: 235 x ø65 mm Shelf life: > 4.5 years
Rinsing time: ~ 5 min Weight: 580 g

Color: green

Brand: Cederroth

SKU	Version	Carton

i

Did you know?

The wound and eyewash spray is the ideal addition to the mobile and stationary first aid equipment. The spray can be easily put into the first aid kit as additional equipment or carried along by its compact size.

Uncomplicated and one-handed, it is suitable for cleaning smaller wounds as well as for washing out foreign bodies in the eyes. The spray does not burn in the wound and sprays in all directions with an even jet.

In contrast to eye rinsing bottles, the wound and eye spray can be used several times and still remains sterile. The protective cap additionally protects the spray head from external soiling.

Actiomedic Wound and Eye Spray, 50 ml

Spray for cleaning smaller wounds and washing out eyes. Contains 0.9% phosphate-buffered sodium chloride solution. Multiple use possible - remains sterile. Can be sprayed with an even jet in all directions. Includes protective cap.

Content: 50 ml

Dimensions: 72 x ø19 mm

Weight: 300 g

Color: blue

Brand: Actiomedic

SKU	Version	Carton
500.000.40050	50 ml buffered wound and eye spray	16 pcs

Cederroth Eye & Wound Cleansing Spray, 150 ml

A eye and wound cleansing aerosol spray bottle filled with sterile 0.9% physiological sodium chloride solution. The device provides a gentle spray douche that is suitable for rinsing and cleansing out dust and dirt from eyes and wounds. Helps to minimize the risk of further infection or damage. Preservative-free, easy-to-use portable spray. The spray works at every angle and in every direction. The actuator is protected by a plastic cap and a tamper seal. The nitrogen propellant is not in contact with the solution. The solution remains sterile until last drop.

Detectable plasters

Detectable plasters with metallic inlays have become widely accepted in food processing as well as in the entire processing and application process as part of quality assurance.

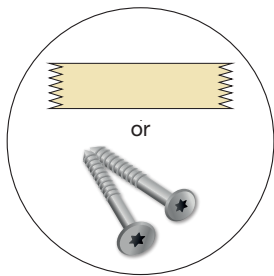

In addition to the metallic inlay, the blue color serves for visual recognition.

Plaster dispenser systems - EasyAid

Actiomedic EasyAid system

Easy assembly

Can be easily attached with screws or adhesive strips

Optional anti-theft protection
If activated, the exchange of the patch refills is only possible with the appropriate key

Easy to find

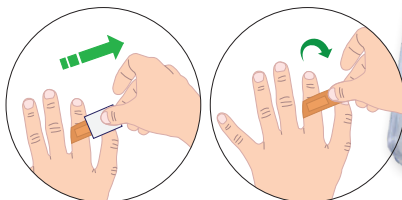

Good visibility even in demanding environments due to signal color orange

Triple protection

Offers space for up to three different types of plasters

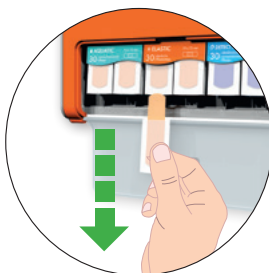

Ready for immediate use

Plasters can be applied directly after removal

Well protected

Fully enclosed housing protects the contents from dirt, dust and splash water

Clean removal

Patch removal downwards = no contamination of the donor by dirt or dripping blood

The EasyAid Reminder

Never again without plasters - the smart Kanban system reminds you in time to order new refills

EasyAid. Easy Life.

The innovative EasyAid plaster dispenser is a high-quality processed and wellthought-out plaster dispenser, which offers a central and clearly visible contact point in the office and business in case of emergency. The handling is intuitive and uncomplicated.

With space for up to three types of plasters, the plaster dispenser offers extensive protection for different applications. The plasters are packed clean and protected in sealing paper until they are removed. Immediately after the removal of a plaster, it is ready for use and can be applied with one hand.

Since the plaster is removed downwards, the dispenser and the remaining plasters are protected from dirt or dripping blood.

Every second counts in the event of a burn!

Burns are damage to the skin that can result from contact with hot objects, flames, heat, electricity, radiation or chemicals. Regardless of how the injury occurs, immediate action is crucial to reduce the extent of the damage and prevent further aggravation.

Burn gel products can help with this, as they can be applied immediately even without water. They are easy to carry, so they can be kept handy in case of an emergency.

Burn gels

Burnshield burn gel sachet, 3.5 ml

Sterile trauma hydrogel which can be used for minor burns and scalds. With its high water and tea tree oil content, cools and soothes by absorbing and dissipating heat which minimises skin damage. Burnshield Gel is a white to off-white gel which turns clear once applied. This allows for monitoring of wound progression. It is non-stick and will not adhere to the wound. It is non toxic and non irritant. Safe to use on Children.

An aesthetic, wall-mounted complex first aid station that combines the best first aid solutions with a modern and practical design. The ideal choice for any workplace, whether office, factory or warehouse, this system provides all the necessary equipment for quick and effective treatment in case of an accident. The wall-mounted design is practical and space-saving, and the system is easy to understand and quickly accessible in an emergency.

- Complete first aid solution in one place
- Space-saving
- Aesthetic, fits perfectly into the environment
- Wall-mountable design – always in sight, always at hand
- All necessary equipment is available and organized
- Quick access when needed
- Increases the level of occupational safety and the security of employees
- Standards-compliant contents:
The first aid kit can be chosen with contents that comply with MSZ (Hungarian) or DIN (German) standards
- Durable materials:
The board is made of 3 mm Dibond, which is resistant to mechanical impact and environmental factors

Recommended areas of use:

- Factories
- Warehouses
- Offices and small businesses
- Educational institutions (schools)
- Community spaces and sports facilities
- Catering
etc.

 - MSZ or DIN standard
- Selectable eyewash with wall holder
 - 500 ml first aid eyewash with 0.9% sodium chloride solution
 - 500 ml 4.7% phosphate buffered eyewash

In the fast-paced and often hazardous environment of construction and industrial workplaces, the communication of health and safety information is not only a regulatory requirement but also a critical element of operational efficiency and workforce safety. Safety boards have emerged as a key tool in this context, offering numerous advantages over traditional notice boards.

Unmatched durability: a long-term investment

Safety boards offer unmatched durability in the industry. They are made from high-quality, durable materials and designed to withstand harsh working conditions. This includes extreme weather conditions, physical impact and wear and tear from everyday use. Unlike traditional plywood or wooden panels, which deteriorate over time, the panels retain their structural integrity and appearance, making them a long-term investment for any organization. This durability ensures that important safety messages and warnings are always visible without having to be replaced frequently, which saves money in the long run.

Customizability and versatility: adapts to all needs

One of the most important features of safety boards is their customizability. Each board can be adapted to the specific requirements of different work areas. This flexibility allows for a wide range of applications, from displaying safety warnings and compliance documents to serving as a communication hub for the workplace. The adaptability of the boards is particularly advantageous in industries where information and requirements change frequently. This means that the same board can be reused for different projects or updated with new information as needed, offering a versatile solution that is not available with traditional board walls.

Enhanced safety: promoting a culture of safety

Safety boards are not just tools for displaying information, but an integral part of an organization's safety culture. Their design ensures that information on compliance with safety regulations is not only visible, but also presented in a form that is easy for all employees to understand. This clarity is essential in busy and hazardous work environments. Boards help companies emphasize their commitment to safety and ensure that all regulatory and safety information is effectively communicated to all employees.

Easy installation and maintenance: a practical solution

The practical nature of safety boards is evident in their simple installation and low maintenance requirements. Unlike traditional signs, which can require complicated installation procedures or frequent maintenance, safety boards are designed for simplicity and ease of use. They can be installed quickly without special tools or expertise and require minimal maintenance. This user-friendly design reduces downtime and labor costs, making the boards a cost-effective solution for improving health and safety communication in any organization.

Safety Board – Fully customisable version

A sturdy, durable, customisable board that is guaranteed to attract attention. The perfect choice for temporary or occasional workstations, on-site safety, first aid or even for displaying advertisements and information. Weather and UV resistant material that does not fade or change colour over time, ensuring a long service life. Cost effective, as it can be dismantled and moved to another location when the job is finished.

What does the board provide?

An information space on a strong and durable board. Its layout can be completely customised to suit your needs and work. Products can be attached to the board using screws and bolts, whether it's an information board, first aid station, hygiene products or anything else. The large transparent holder at the bottom of the board helps with the layout and can be used to store additional information, accessories, first aid, occupational safety and fire safety products.

RED - RBCURED

Red is a well-known warning colour. Most people intuitively know that red means danger or something particularly important, and shades of red attract attention. It is especially recommended for fire safety products.

ORANGE - RBCUORA

Orange colours are particularly striking. It is impossible to pass by them indifferently; it is a colour that is highly visible and expressive, yet does not cause anxiety. Thanks to this, it informs you that what is on the sign is very important. Orange signs are specifically designed for conveying information.

YELLOW - RBCUYEL

Designed specifically for construction sites where health and safety information signs are required. Yellow signs are highly visible from a distance, so everyone can find them easily.

GREEN - RBCUGRN

Designed specifically for first aid products, as the highly visible green sign is recognisable to everyone and indicates the location of the first aid station.

BLUE - RBCUBLU

Designed specifically for hygiene purposes and information transfer. Recommended for the hospitality and food industries, for promoting services and for places where mobile hygiene stations are needed.

WHITE - RBCUWHI

The white sign is characterised by its universal usability. It can be used anywhere and in any way, whether for meetings, hygiene or first aid.

Safety Board – Fire Point

The fire point contains all necessary information in case of fire. Weatherproof transparent holders allow for the storage of mandatory documentation and information. The lower holder is suitable for any type of fire extinguishers, up to 9 kg / 9 litres each. The wireless on-site alarm fire alarm point is ideal for applications that require temporary fire protection equipment, such as construction sites or events. This mobile fire alarm point has a robust HDPE base and a strong metal fire extinguisher holder. Additional fire extinguishers or first aid products can also be placed on the board.

Content:

- Main Board with transparent Polycarbon slot at the bottom
- 2x Supports, that can be filled with water for ballast (75 litres each) or fixed to the ground
- 1x Push Button Alarm
- 1x Magnetic Whiteboard (700 mm x 500 mm) with marker and eraser
- 2x Transparent Document Protective A3 size pockets
- 3x Transparent Document Protective A4 size pockets
- 1x Luminescent Fire extinguisher sign 200 x 200 mm
- 1x “Meet the person responsible for your safety” acrylic mirror
- 1x White fire extinguisher stand attachable to main board
- Fixings to join main board and supports (8) and concrete fixings (4)

Other products shown in the pictures are for illustrative purposes only.

Emergency shower systems | Professional solutions

Safety without compromise

A safe working environment is a fundamental requirement in any industry where hazardous chemicals, corrosive substances or extreme temperatures are present. B-Safety's professional emergency shower systems provide immediate assistance in critical situations – when every second counts.

Reliability you can count on

Thanks to decades of experience and continuous innovation, the German company B-Safety has become one of the world's leading suppliers of industrial and laboratory safety technology. Its products comply with the strict EN 15154 and ANSI Z358.1 standards, ensuring the highest level of protection in all areas of application.

Wide range of applications

B-Safety systems are the ideal choice for:

- For chemical and pharmaceutical plants
- Research institutes and universities
- In laboratory environments
- Industrial production areas
- Outdoor and extreme environmental conditions

Functionality and durability

Every B-Safety product is designed to be quick and easy to activate – even in panic situations. The stainless steel design, UV-resistant components and ergonomic operating elements ensure a long service life and minimal maintenance requirements.

Tailored to individual requirements

B-Safety offers more than just standard systems. Shower systems can be designed to meet individual requirements, whether you need a special layout, zone classification or have specific workplace requirements.

More than just a product: your safety partner

Emergency shower systems not only save lives, they are also key elements of corporate responsibility and regulatory compliance. B-Safety solutions become an integral part of your safety equipment, ensuring peace of mind – every working day.

Hand-held eye showers

Two showers in one - this is possible thanks to the unique design of these showers: the hand-held eye showers can be operated as a fixed installed eye shower in the holder, or be removed from the holder to care for injured persons on the floor as a hand-held eye shower.

- One or two spray heads variations
- High-performance spray head for a limited, uniform and soft water jet – optimized for rinsing chemicals out of eyes
- Integrated automatic flow regulator to achieve the correct jet height, regardless of the water pressure
- Integrated check valve to protect the drinking water network
- Rubber sleeves around the shower head protect the party seeking aid from impact injuries
- Dust caps open when the eye shower is actuated due to the water pressure
- Large holes in the shower heads prevent standing water and therefore limescale

Fixed installed eye showers

Fixed installed eye showers are the best solution for many applications in laboratories, warehouses and in industry. These showers are always easily visible from all sides. The large PUSH lever is photoluminescent so it is easy to find in the dark or in poor visibility conditions. Eye showers with bowls collect the used water and drain it away. The eye/face showers with a bowl and lid are used wherever there is a lot of dust and dirt.

- High-performance spray head for a limited, uniform and soft water jet – optimized for rinsing chemicals out of eyes
- Integrated automatic flow regulator to achieve the correct jet height, regardless of the water pressure
- Photoluminescent PUSH lever for good visibility, even in the dark
- Rubber sleeves around the shower head protect the party seeking aid from impact injuries
- Dust caps open when the eye shower is actuated due to the water pressure
- Large holes in the shower heads prevent standing water and therefore limescale

Body emergency showers

The different body safety showers always offer you the right solution for your installation situation. Thanks to the selectable volume flows from 50 to 110 liters per minute, the showers can be adapted to the respective hazardous situation on site or the hazard class I to III as per EN 15154. The body emergency showers are self-draining, largely limescale-free and maintenance-free.

- High-performance shower head for a limited, uniform and soft water jet – optimized for rinsing chemicals off of the skin
- Self-draining, largely limescale-free and maintenance-free as well as very durable and corrosion-resistant
- Perfect adjustment of the body emergency shower to the respective hazardous situation on site thanks to the selectable volume flows from 50 to 110 liters per minute
- Robust design is also suitable for tough everyday industrial use
- Variable body emergency showers that can be adapted to the conditions on site
- Chemical-resistant polyester powder coating for use in aggressive environments

B-Safety ClassicLine body safety shower, for wall mounting

Water inlet: 3/4"-es male/female

Flow rate: 75 l/min | 20 GPM

Emergency shower combinations

The safety shower combinations – combinations of body emergency showers and eye showers – save more space compared to an individual installation. This makes it possible to create a central point of contact for first aid. Thanks to the possible combination with a hand-held eye shower or hand-held eye shower, an injured party can also partially care for minor injuries without having to use the body emergency shower.

- High-performance shower head for a limited, uniform and soft water jet – optimized for rinsing chemicals off of the skin
- Robust design is also suitable for tough everyday industrial use
- Perfect adjustment of the body emergency shower to the respective hazardous situation on site thanks to the selectable volume flows from 50 to 110 liters per minute
- Self-draining, largely limescale-free and maintenance-free as well as very durable and corrosion-resistant
- Variable body emergency showers that can be adapted to the conditions on site
- Chemical-resistant polyester powder coating for use in aggressive environments

B-Safety ClassicLine safety shower combination, with eye shower, for wall mounting

Water inlet: 3/4" female

Freestanding emergency showers

The freestanding industrial safety showers are always used wherever a shower wall mounting is not possible or a central point of contact for first aid is to be created. It also makes sense to use them in large industrial halls and production facilities. The good visibility of the shower from all sides is a major advantage. The freestanding emergency showers can optionally be adapted to the local conditions with a large selection of options.

- High-performance shower head for a limited, uniform and soft water jet – optimized for rinsing chemicals off of the skin
- Robust design is also suitable for tough everyday industrial use
- Perfect adjustment of the body emergency shower to the respective hazardous situation on site thanks to the selectable volume flows from 50 to 110 liters per minute
- Self-draining, largely limescale-free and maintenance-free as well as very durable and corrosion-resistant
- Variable body emergency showers that can be adapted to the conditions on site
- Chemical-resistant polyester powder coating for use in aggressive environments

Defibrillators | Saving lives with the touch of a button

The defibrillator

A defibrillator is a life-saving medical device used in cases of sudden cardiac arrest (SCA) to restore the heart's electrical activity. The device uses an electric shock to help restore normal heart function.

Importance

Sudden cardiac arrest is one of the leading causes of death worldwide. The help provided in the first few minutes is crucial: without defibrillation, the chances of successful resuscitation decrease by 7-10% every minute. Semi-automatic (AED) or automatic defibrillators available in public places, institutions, or workplaces significantly increase the chances of survival.

Types

- Automatic external defibrillator (AED): A user-friendly device that can be used safely by laypeople. It provides audio and visual instructions to assist with its use.
- Semi-automatic defibrillator: Analyzes the heart rhythm and provides audio and visual instructions, but the user must initiate the shock.
- Manual defibrillator: A device used by healthcare professionals that offers advanced settings.
- Implantable defibrillator (ICD): A surgically implanted device that automatically detects and corrects life-threatening heart rhythms.

How it works

The defibrillator detects ventricular fibrillation (heart rhythm disturbance) underlying sudden cardiac death and recommends delivering an electric shock, which has a high chance of restoring normal heart function.

Use (in the case of an AED)

1. Switching on: Voice prompts are activated.
2. Placing the electrodes: The electrode pads must be placed on the patient's chest according to the illustrated instructions.
3. Rhythm analysis: The device automatically analyzes the heart rhythm.
4. Shock (if necessary): The device delivers the shock automatically or when the user presses the button.
5. Continue CPR: If the shock was unsuccessful, the AED instructs the user to continue CPR.

Maintenance and operation

Most AED devices have a self-check function that runs daily or monthly, depending on the device. In case of a fault, the device will indicate this and will not allow use. The warranty period of the battery and electrodes must be recorded so that replacements can be made at the appropriate time, before expiry.

According to the Hungarian Decree 4/2009. (III. 17.) EüM on medical devices, defibrillators are among the products subject to periodic inspection, so annual inspection of these products is mandatory!

ZOLL AED Plus defibrillator

ZOLL AED Plus semi-automatic defibrillator

The ZOLL AED Plus semi-automatic defibrillator supports effective treatment of sudden cardiac arrest with real-time CPR feedback and intelligent assistance features. A durable, long-term device designed for corporate, institutional, and industrial use. The device uses Real CPR Help® technology to provide real-time feedback on the depth and frequency of chest compressions, helping both lay and professional users perform effective resuscitation. The defibrillator uses intuitive voice prompts and visual displays to guide the user through each step, from assessing the patient's condition to delivering the shock.

- Real CPR Help®: real-time feedback on the correct performance of compressions
- CPR-D Padz: a single-piece electrode for quick and accurate chest placement
- Automatic ECG analysis and shock instructions: the device analyzes the patient's heart rhythm and only authorizes shock delivery if necessary
- Pad and batteries with a 5-year lifespan: low maintenance, cost-effective operation
- IP55 rating: protection against dust and splashing water for outdoor or industrial environments
- Automatic self-testing: daily, weekly and monthly self-checks to ensure continuous operational reliability
- Pediatric compatibility: Can also be used for children under 8 years of age or weighing less than 25 kg with the separately available Pedi-padz II electrode
- Rectilinear Biphasic® waveform: Clinically validated, effective shock parameters even in cases of high body resistance

Dimensions: approx. 300 x 230 x 90 mm

Weight: 2.5 kg

Contents: Zoll AED Plus semi-automatic defibrillator, Zoll AED Plus CPR-D Padz electrode with real-time CPR feedback, 10x Duracell batteries, Carrying case, AED logbook, Resuscitation kit (wipes, razor, scissors), 1x Defibrillator sticker (15 cm x 15 cm)

ZOLL AED Plus defibrillator accessories

ZOLL AED Plus CPR-D Padz adult electrode

The ZOLL CPR-D Padz is a uniquely designed, single-piece adult defibrillator electrode developed for use with the ZOLL AED Plus device. The electrode contains an integrated positioning system that allows the user to quickly, accurately, and effectively place the pads on the patient's chest. The CPR-D Padz is part of ZOLL's Real CPR Help® technology, which measures and provides feedback on the quality of chest compressions.

Lifespan: 5 years

ZP023	Two-piece, single-use adult electrode, specifically designed for professional, advanced care environments	1 pcs

ZOLL AED Plus Pedi-Padz II pediatric electrode set

The ZOLL Pedi-Padz® II pediatric electrode is specifically designed for defibrillation of children aged 0–8 years or weighing less than 25 kg. The ZOLL AED Plus automatically recognizes when the Pedi-Padz II is connected and switches to pediatric mode, with reduced energy levels and child-friendly visual and audio prompts. The pads feature a clearly visible pictogram to aid in proper placement. Recommended for use in educational institutions, childcare facilities, healthcare settings, and home environments where children may need care.

Lifespan: 2 years

Use: children (under 8 years or under 25 kg)

CARDIAC Powerheart® G5 defibrillator

Cardiac Science Powerheart® G5 semi-automatic defibrillator

The Powerheart G5 is Cardiac Science's most advanced AED device, featuring advanced technologies to help provide effective care for sudden cardiac arrest. Intellisense™ CPR feedback provides real-time audio and text feedback on compression depth and rhythm. The RescueCoach® intuitive instruction system guides the user step by step at their own pace. It is ready to deliver a shock within 10 seconds of electrode placement. Capable of delivering up to 360 J, it assesses the patient's body resistance before shocking and automatically adjusts the shock energy value accordingly, ensuring a personalized intervention.

- Real-time CPR support: Intellisense™ technology ensures high-quality resuscitation
- Dual language: Switch between English and Spanish rescue language with the push of a button
- Rescue Ready® self-check: Daily/weekly/monthly automatic tests to monitor the condition of the battery, electrodes, and circuits
- IP55-rated, rugged design: Dust and water resistant, shock and vibration resistant – meets military standards
- Fast shock delivery: <10 seconds shock delivery after completion of CPR cycle
- Adaptive energy management: Escalating Variable Energy (VE) technology continuously adjusts the shock energy based on the patient's body resistance and the success of the shock
- Non-polarized electrodes: Interchangeable electrodes – easy to use, reduced possibility of error
- Remote data management: 90 minutes of saved event data available via USB, with PlusTrac/AED Manager ERP support
- Pediatric use: Optional pediatric electrodes make it safe for children under 8 years of age (≤25 kg)
- Long-life accessories: Battery with up to 4 years of operational warranty and 5 years of post-production life; electrodes can be used for up to 2 years
- Warranty: 7-year manufacturer's warranty

Dimensions: approx. 300 x 230 x 90 mm

Weight: 2.5 kg

Content: Powerheart G5 semi-automatic defibrillator, Powerheart G5 adult electrode, Powerheart G5 battery

Brand: Cardiac Science

CARDIAC Powerheart® G5 defibrillator accessories

Cardiac Science Powerheart® G5 adult electrode set

The Powerheart G5 Intellisense® adult electrode is non-polarized, so it can be placed on either side, saving time during use. Rescue Ready® technology's built-in circuitry transmits electrode presence, validity, patient type, and current defibrillation protocol energy to the device—all of which can be stored in real time for later analysis.

Lifespan: 2 years

Use: adults (8 years or over 25 kg)

Brand: Cardiac Science

SKU	Version	Carton
XELAED001A	Two-piece, single-use adult electrode set for Powerheart G5 defibrillator	1 pcs

Cardiac Science Powerheart® G5 adult electrode set with built-in CPR sensor

Intellisense® adult electrodes with built-in CPR feedback sensor (iCPR), which provides real-time guidance on compression quality. Not only does it have a pair of electrodes for defibrillation, but it also has a built-in compression sensor (CPR Device) that provides real-time audio and text feedback on the depth and rhythm of chest compressions, helping lay responders with messages such as „press harder“ or „release completely.“

Lifespan: 2 years

Use: adults (8 years or over 25 kg)

Brand: Cardiac Science

SKU	Version	Carton
XELAED002A/B	Two-piece, single-use adult electrode set with built-in CPR sensor for Powerheart G5 defibrillator	1 pcs

Cardiac Science Powerheart® G5 pediatric electrode set

The Powerheart G5 Intellisense® pediatric electrode is specifically designed for defibrillation of children aged 0–8 years or weighing less than 25 kg. The device automatically recognizes when the pediatric electrode is connected and switches to pediatric mode, with reduced energy shocks and child-friendly visual and audio prompts. Thanks to their non-polarized design, the electrodes are interchangeable, allowing for quick and easy placement. The Rescue Ready® system transmits information (e.g., expiration date) in the same way as the adult versions. It is recommended for use in educational institutions, childcare facilities, healthcare clinics, and home environments where children may need care.

Lifespan: 2 years

Use: children (under 8 years or under 25 kg)

Brand: Cardiac Science

SKU	Version	Carton
XELAED002A-500	Two-piece, single-use pediatric defibrillator electrode set for Powerheart G5 defibrillator	1 pcs

Cardiac Science Powerheart® G5 Intellisense® battery

The Powerheart G5 Intellisense lithium battery is a medical-grade, non-rechargeable battery that keeps the Powerheart G5 defibrillator in a constant state of readiness. The internal circuitry communicates data (e.g., date of manufacture, charge status, temperature, regular self-test results) to the device, ensuring the Rescue Ready® indicator — promoting reliable operation at all times.

Lifespan: 4 years in standby mode

Capacity: 250 shocks or 16 hours of continuous monitoring

Brand: Cardiac Science

SKU	Version	Carton
XBTAED001A	Battery for Powerheart G5 semi-automatic defibrillator	1 pcs

LIFEPAK CR2 defibrillator

Lifepak CR2 semi-automatic defibrillator

The LIFEPAK CR2 is one of the defibrillators that can be safely used by laypeople. The device is activated with a single movement (by opening the lid) and then guides the user with clear audio and visual instructions. CPR support is provided in real time with a metronome (cprCOACH™), and ClearVoice™ technology automatically adjusts the volume depending on the ambient noise. The cprINSIGHT™ analysis algorithm enables ECG analysis and, if necessary, shock delivery during compression, minimizing interruptions. Capable of delivering up to 360 J, it assesses the patient's body resistance before shock delivery and automatically adjusts the shock energy value accordingly, ensuring a personalized intervention.

- cprINSIGHT™ analysis during compression: A unique algorithm that analyzes heart rhythm without interrupting chest compressions, reducing interruptions and increasing resuscitation efficiency.
- cprCOACH™ metronome and instructions: Real-time feedback on the pace and rhythm of chest compressions.
- ClearVoice™ technology: Automatically adjusts the volume to ambient noise, so instructions remain clear even in crowded or noisy environments.
- QUIK-STEP™ electrodes: Pre-connected, quick-release electrodes that can be used on both adults and children.
- Child mode button: Allows for safe treatment of children without the need for separate electrodes.
- Energy escalation: First shock: 150/200 J, second: 300 J, third and subsequent: 360 J.
- Fast shock delivery: Thanks to the pre-charge mechanism, the shock can be delivered immediately after the analysis is complete, without wasting time.
- Dual language mode: Switch between two preset languages (e.g., Hungarian-English) with a single button press.
- Wi-Fi / 3G connection: Connected to the LIFELINKcentral system, the device status and usage can be continuously monitored. This allows for the prediction of maintenance needs and quick download of event data.
- Automatic self-check: Daily, weekly, and monthly self-tests: checks the battery, electrodes, software, and circuits.
- LIFEPAK TOUGH™ : IP55 protection against dust and splashing water, reliable in outdoor and industrial environments.
- Robust design: The device is resistant to drops, vibrations, and extreme temperatures.
- Memory capacity: Records all event data (ECG, interventions), which can be downloaded and analyzed via USB or wireless connection.
- Long-life accessories:
 - Battery: up to 4 years of standby time
 - Electrodes: 2-year lifespan
- Manufacturer's warranty: 8 years

Dimensions: approx. 274 x 226 x 97 mm

Weight: 2.0 kg

BEXEN Reanibex 100 defibrillator

Bexen Reanibex 100 semi-automatic defibrillator

The Bexen Reanibex 100 semi-automatic defibrillator is an intuitive, user-friendly device designed for both lay and professional users. It can be used on both adults and children. 0-second charge time: Pre-charging begins during analysis, so no additional time is required. This can save the patient 8-15 seconds, as every second increases their chances of survival. Despite its compact size, it offers state-of-the-art, reliable technology for the effective treatment of sudden cardiac arrest. The device automatically analyzes the patient's ECG and only authorizes defibrillation if necessary. Its voice prompts and display guide the user step by step through the resuscitation process. The device is an excellent choice for places where children are often present (e.g., schools, kindergartens) or where it takes longer for emergency services to arrive.

- Biphasic technology: 150–200 J for adults, 50–90 J for children, according to ERC/AHA and ERC 2021/17 guidelines
- Real-time CPR support: metronome and compression frequency feedback
- Voice assistance during the event to guide the user. Message volume adapts to ambient noise level
- 0-second use: automatically turns on and starts charging when the lid is opened. Pre-connected and pre-charged pads facilitate rapid shock delivery
- Automatic self-test: daily self-check with status alerts (battery, pad expiration, lid opening)
- Robust design: IP65 dust and water protection for outdoor or industrial use, 1.2 m drop resistance
- Automatic self-test: daily self-check with status alerts (battery, pad expiration, lid opening)
- Easy to carry: <2.15 kg total weight with handle and battery
- Pediatric mode: child mode can be activated at the touch of a button for cases under 25 kg
- Data communication options: USB, Wi-Fi, Sigfox, and NFC allow remote monitoring of the device status and data collection via the Reanibex mobile app interface

Dimensions: approx. 217 x 285 x 96 mm

Weight: 2.15 kg

Content: Bexen Reanibex 100 semi-automatic defibrillator, Bexen Reanibex 100 dual adult/child electrode, Bexen Reanibex 100 battery, Bexen Reanibex 100 carrying case, Resuscitation kit (wipes, razor, scissors), 1 defibrillator sticker (15 cm x 15 cm)

DJS-3000	Battery for Bexen Reanibex 100 defibrillator	1 pcs

Defibrillator accessories

Arky green indoor AED cabinet with alarm

High-quality, durable metal cabinet for indoor use. Suitable for storing all brands of AED devices. Green color, perfectly powder-coated, which does not wear off. Thanks to the acoustic alarm, the defibrillator is better protected against theft and misuse.

Dimensions: approx. 380 × 380 × 200 mm

Weight: 5.00 kg

Color: green

Brand: Arky

SKU	Version	Carton
A300	Indoor green defibrillator cabinet with alarm	1 pcs

AED resuscitation kit

The resuscitation kit is the ideal accessory for any semi-automatic or automatic defibrillator. It contains the sterile and disposable devices that are essential for successful resuscitation. The kit makes the procedure faster, more hygienic, and safer for both lay and professional first responders.

Content: AMBU breathing mask, scissors, towel, isolation blanket, razor, latex gloves

SKU	Version	Carton
AED-023	AED resuscitation kit	1 pcs

Stretchers | Essential equipment for patient transport

Mobility in emergencies

A stretcher is a patient transport device designed primarily for the safe movement and transport of immobile or injured persons. Their use is essential in healthcare, emergency rescue, disaster relief, and military field care. The purpose of a stretcher is to provide stable support and comfortable but efficient mobility for the patient, while protecting them from further injury and facilitating the work of rescue personnel.

Importance

Choosing the right stretcher has a significant impact on patient safety and rescue efficiency. An ergonomically designed, durable, and easy-to-handle stretcher:

- reduces the risk of injury during transport,
- facilitates rapid evacuation and care,
- spares rescue personnel from excessive physical strain

Types

Stretchers can be classified into several categories according to their intended use, material, and design:

- Fixed stretchers: Simple, stable devices, usually made of aluminum, stainless steel, or lightweight alloys. Their classic versions are often used in military, disaster relief, or mass event settings.
- Foldable stretchers: They offer compact storage and transportability, ideal for ambulances and smaller rescue units. They are often equipped with a telescopic or accordion-like mechanism.
- Roller stretchers (mobile patient transport beds): Used in hospital and ambulance settings, these are wheeled versions, often with hydraulic or electric height adjustment. They allow for easy movement and positioning.
- Evacuation stretchers: Made of lightweight, soft or semi-rigid materials. Ideal for rescue in hard-to-reach locations, such as stairs and narrow corridors.
- Basket stretchers: Stable, „basket-like” structure that provides protection for the patient, especially during rescues involving climbing, water rescue, or extreme conditions.

Functional features

Modern stretchers have a number of useful features:

- Adjustable backrest and footrest – to ensure patient comfort and medical positioning.
- Safety straps and attachment points – to secure the patient during transport.
- Radiolucent surface – allows X-rays to be taken without moving the patient.
- Antibacterial, easy-to-clean materials – to prevent infections.
- Integrated IV holder or oxygen cylinder holder – to support emergency care.

Interesting fact

As a historical fact, the concept of the stretcher dates back to ancient Egypt, where stretchers were already used on the battlefield to move the wounded. The development of modern stretchers accelerated in the early 20th century, especially during the world wars, when the need for fast, efficient, and safe patient transport increased.

Spencer stretchers

Spencer 100 foldable stretcher

Compact, foldable stretcher with a lightweight aluminum frame, ideal for rapid deployment and emergency patient transport. The lying surface is water-repellent and can be disinfected, making it hygienic and durable in the long term. Thanks to its foldable design, it takes up little space and can be quickly put into operation, which is particularly important at mass events, in disaster situations or in confined rescue environments.

- Folds at two points for quick storage
- Strong aluminum frame for easy portability
- Waterproof and antibacterial lying surface
- 4 ergonomic grip points for safe lifting
- 2 adjustable safety straps for securing the patient
- Load capacity up to 170 kg

Length (unfolded): 2100 mm Support legs: 4
Length (folded): 1000 mm Grip points: 4
Width: 480 mm Color: orange
Height: 140 mm Material: aluminum, steel, PVC
Thickness when folded: 170 mm Load capacity: 170 kg
Weight: 5.5 kg

Spencer Twin Shell basket stretcher

Professional, two-part stretcher designed for transporting patients with spinal injuries or who are unconscious. The name Twin Shell refers to its double, shell-like structure: the stretcher consists of two halves that can be joined together under the patient without having to move the body significantly. Made of high-density polyethylene, the stretcher's robust shell provides unparalleled protection for patients, protecting them from side impacts during transport, even on uneven and dangerous terrain. Its thoughtful design also provides ample space for various devices, such as life support systems, footrests, and other essential emergency equipment needed during transport. Thanks to its divisibility, the stretcher can be easily divided into two parts and nested together for efficient storage, providing a compact and space-saving solution.

- Can be divided into two parts: can be assembled under the patient and stored in a space-saving manner
- Strong aluminum frame and polyethylene shell
- Space for life support equipment
- Waterproof and antibacterial lying surface
- 12 lifting points for safe lifting and transport
- 2 adjustable safety straps for securing the patient
- Load capacity up to 280 kg

Length (unfolded): 2140 mm Grip points: 12
Length (folded): 1180 mm Color: orange
Width: 650 mm Material: aluminum, steel, PP, PE
Height: 200 mm Load capacity: 280 kg
Weight: 13.8 kg

Spencer stretchers

Spencer B-Bak Pin Max spinal board

The Spencer B-Bak Pin Max is a top-of-the-line spine stabilizing spine board designed to provide maximum stability and versatile fixation options during the rescue of spine and polytrauma patients. Rigid yet lightweight, it weighs only 6 kg and can lift up to 454 kg. It is fully X-ray, MR, and CT compatible, so there is no need to transfer the patient before imaging tests. The smooth, continuous surface is resistant to contamination and easy to disinfect. Ideal for transporting patients for emergency services, hospitals, and disaster response units.

- 14 integrated attachment points – for quick and secure fastening of straps
- Strong yet lightweight construction – HDPE material with foam core technology
- Fully X-rayable, MR/CT compatible
- Ergonomic carrying handles – can be gripped from all sides
- Waterproof, floats on water – also suitable for water rescue situations
- Easy to disinfect, closed surface
- Load capacity up to 454 kg

Length: 1840 mm

Width: 405 mm

Height: 45 mm

Weight: 6.0 kg

Grip points: 14

PIN strap points: 8

Color: yellow

Material: PE

Load capacity: 454 kg

Wheelchairs

Wheelchairs play a key role in improving the quality of life for people with limited mobility. They are not just a means of transportation, but essential tools for independent living, social participation, and a dignified life. The wide range of modern wheelchairs allows every user to find the type that best suits their needs, whether for temporary or long-term use, indoor or outdoor transportation, or an active or passive lifestyle.

In addition, wheelchairs can often be used in first aid and accident situations – for example, for temporary mobilization, patient transport, or emergency evacuation of people with limited mobility in environments where the use of a stretcher is not possible. In such cases, an easily movable, foldable, stable wheelchair is advantageous, as it allows for quick and safe transport.

Spencer Weld 425 portable and foldable transport chair

Kompakt és könnyű, összecsukható alumínium vázú kerekesszék, négy kerékkel, gyors és biztonságos betegszállításához mentési és sürgősségi környezetben. Ideális beltéri és kültéri használatra. 1. step: Protect your skin with a pre-work cream!

Their use will help prepare the skin to protect it from various stresses during work. They prevent dirt from penetrating the skin, so that less and milder cleansing products are needed for proper cleaning.

2. step: Wash your hands regularly!

It's important to choose the right cleaning product based on the type of soiling to avoid unnecessary water and detergent use. Frequent hand washing or disinfecting can put a lot of strain on the skin of the hands, so it is important to choose a cleanser and disinfectant that is gentle on the skin during use and does not damage it, unlike most cleansers and disinfectants on the market. The use of a pre-work product will significantly increase the effectiveness of cleaning.

3. step: Regenerate your tired hands skin after work!

A proper skin care product will nourish and regenerate „tired“ hands that have been stressed during the day's work. It helps to restore the ideal oil and water balance. Regular use of a hand cream will leave your skin smooth and soft to the touch, even after intense work.

If you use hand hygiene products from a dispenser, the precise amount measured by the device will ensure that you significantly reduce excess consumption. Our hand hygiene products are supplied in a range of dispensable packs to reduce the frequency of refills.
